How does your wall 'behave'?

Team subjects prefab wall to earthquake, wind forces

By Tom R. Nelson

PRECAST, CONCRETE WALLS ARE BEING TESTED TO SEE HOW THEY BEHAVE UNDER EARTHQUAKE AND WIND FORCES.

The tests are being conducted by a team of researchers from the University of Maryland, the U.S. Army Corps of Engineers and the National Institute of Standards and Technology.

The team is testing a new type of precast concrete wall system that is designed to be more resistant to seismic forces than traditional masonry walls. The system consists of precast concrete panels that are joined together using a special type of joint.

The tests are being conducted in a large wind tunnel and a shake table.
